

M201

Precision High Voltage Capacitance Bridge

Precision High Voltage Capacitance Bridge **M201** measures the capacitance and dissipation factor ($\tan\delta$) with high accuracy.

Measuring using **M201** requires the use of the external high voltage standard capacitor. Maximum test voltage is limited highest voltage value of standard capacitor.

FEATURES AND BENEFITS

- High measurement accuracy C& $\tan\delta$ testing: up to $\pm 0,002\%$ (C_x) and $\pm 0,00002$ ($\tan\delta$)
- Measurement of C& $\tan\delta$ at test current up to 50 A
- Easy handling
- Small size and low weight

APPLICATIONS

- **M201** is used for:
 - Precision C& $\tan\delta$ measurement of standard capacitors
 - Precision C& $\tan\delta$ measurement of capacitors and HV cables with large capacitance
 - C& $\tan\delta$ testing on rated voltage of: Instrument Transformers, Power Transformers, Bushings, Switches, Surge Arresters, Capacitors, Cables
 - Metrological research
